

TAKEOFF. REIMAGINED.

Model-Based Estimating

VECTOR™ a professional-grade 2D quantity takeoff solution that extracts 3D data

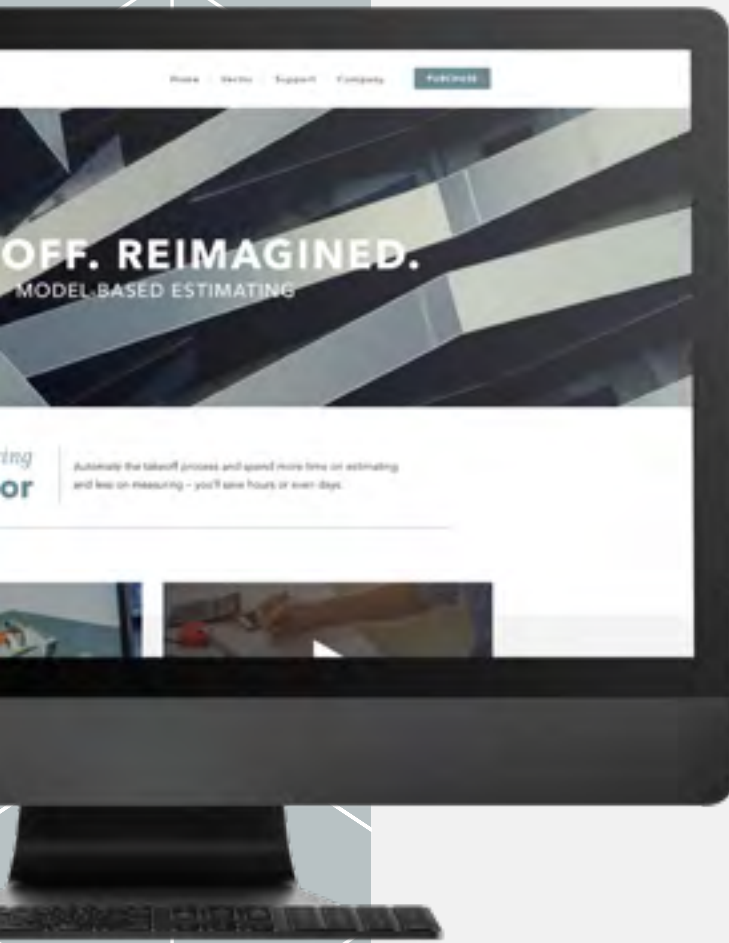

Automate the takeoff process and spend more time on estimating and less on measuring—you'll save hours or even days.

Built by Construction Estimating Experts Who Understand Your Business

Estimating Edge's team of experienced construction professionals and software engineers have developed the industry's smartest takeoff and estimating software solutions for competitive estimates.

Unlike any other market solutions, VECTOR™ is 2D quantity takeoff web-based solution that extracts 3D data and speeds up the takeoff process by up to 80%.

Don't just estimate faster. Estimate better.™

Focus on The Estimate, Instead of Coloring in the Lines

Simply import and let VECTOR extract quantities from the 3D model. Filter out the noise, verify the properties, and finish with an automated 2D quantity takeoff.

Best of all, VECTOR can be used alone for takeoff and estimating or with the professional-grade estimating solution The EDGE. It's robust and detailed enough for bids of any size and intuitively designed to help both new and seasoned estimating professionals work smarter, bid sharper and build better.

The VECTOR™ *Advantage*

Spend less time measuring the plan with model-based estimating

Automated Quantities from 3D Models

Leverages new technology without having to learn complex 3D software.

2D Quantity Takeoff

After you've validated the 3D elements, finish the takeoff in 2D or use this powerful solution with just 2D plans.

Web-Based

That's lightning fast—it uses the latest technology.

Document Management

A central location for all plans & documents with cloud-based document management.

Intelligent-advanced Filtering & Searching

So you quickly find the details you need.

Groundbreaking 3D Viewer

View design conflicts while you estimate. Select 2D elements on one monitor and the synchronized 3D viewer will highlight the same shape on the second monitor. Easily navigate the 3D model, understand how it's built, and identify additional materials and labor you might miss on 2D plans.

Intelligent/Intuitive Assemblies

With templates that can be saved & customized.

Export or Use Reports

To share details with Accounting, The Field, Owners or General Contractors, and more!

Integrates with The EDGE® Estimator

Access powerful estimating tools in The EDGE, as well as Cloud Reporting, EDGE On Site® & more!

The Future of Takeoff with Model-Based Estimating

Built on tomorrow's technology and created by experienced construction industry professionals, VECTOR™ is a web-based, automated 3D & 2D quantity takeoff solution that extracts 3D data. Start your takeoff with a 3D model created by the architect, validate quantities/materials or view design conflicts with the next-gen 3D viewer and finish with a 2D takeoff. Spend time focused on the estimate, instead of point and clicking in the takeoff. With the ability to measure by imperial or metric, your team can use the same solution, regardless of which country your project is located.

This ground-breaking, all-in-one solution eliminates part of the takeoff process so you can move through up to 80% faster! With technology this revolutionary, you can save hours or even days.

Model-Based Estimating with Automated Quantities from 3D Models

With three options that scale with your business, this web-based, lightning fast, 2D quantity takeoff solution lets you extract 3D models and filter out details relevant

to you. To verify quantities, click on the 3D element and view the quantities and materials specified. Model incomplete? It happens, simply finish your takeoff in 2D.

Leverage New Technology Without Having to Learn BIM

Why do extra work? With VECTOR, it's so easy to leverage new technology without having to learn BIM. Don't have the 3D model? Ask for it. Not available? Use VECTOR, the professional-grade 2D quantity takeoff solution—You'll wonder how you ever estimated without it.

Web-Based, 2D Quantity Takeoff

Don't have a 3D model? We've got you covered! Customized for your trade, it's easy to import project plans, create custom assemblies, and calculate material and labor totals. This online takeoff solution gives your team a place to store all your documents in the cloud so your team can access regardless of where they are located. Don't need all the bells and whistles? We've got options that fit your team and your budget!

Estimating Edge's team of experienced construction professionals and software engineers have developed the industry's smartest takeoff and estimating software solutions for competitive estimates. Don't just estimate faster. Estimate better.™

Takeoff. Reimagined.
